Understanding the ePAQ Report

Disclaimer

The information provided by ePAQ® is intended for guidance only and should not be used in isolation. It should only be used in conjunction with other assessments of health, including previous and current medical history, examination findings and the results of relevant investigations. Some of these assessments may only be available by consulting a general practitioner or specialist. The symptoms scores provided are also only a guide to possible conditions or causes of underlying symptoms. They do not exclude serious illness, nor do they confirm the presence of any specific disease or abnormality. ePAQ Systems Ltd is not responsible or liable for any form of damages whatsoever resulting from the use (or misuse) of information contained in, generated by or implied by this questionnaire and associated software.

When interpreting reports, it should always be borne in mind that errors sometimes occur in understanding, transcribing, transferring or storing questionnaires, information and data. Subjects who are concerned about any aspect of their health (whether or not covered by this questionnaire) are strongly advised to seek medical advice, irrespective of the results of the results of this questionnaire.

Understanding ePAQ analysis & symptoms scores

This section provides clinically meaningful domain scores for related symptoms in each dimension. The clock face to the right of each domain score indicates the maximum severity of any of the symptoms that contribute to that domain score: Empty circle = 'Not a problem', 1/3 circle = 'A bit of a problem', 2/3 circle = 'Quite a problem', full circle = 'A serious problem'.

Information about the domain score and related medical conditions can be found in the information links (reached by pressing the clock face icon to the right of the domain score itself). Each item within a domain contributes equally to the final domain score.

Domain scores are presented on a scale of 0 - 100: Low score = absent or minimal symptoms, high score = frequent or severe symptoms (0 = minimum symptoms, 100 = maximum symptoms). If any data are missing, a score is not calculated for that domain. Items that do not contribute to a domain score can be viewed in the Itemised Report

Key To Symbols

-	=	Skipped automatically			
x	=	Declined to answer			
Symptom frequency / Severity (left hand column)		Impact (right hand column)			
0	=	Never / Not at all	0	=	Not a problem
1	=	Occasionally / A little	1	=	A bit of a problem
2	=	Most of the time / Moderately	2	=	Quite a problem
3	=	All of the time / A lot	3	=	A serious problem
